The list box includes all the customer codes that have been added to the customer sheet. The sheet also contains calculations that can be used to analyze the trips that are charged to clients on a monthly basis. Total charges that have been allocated by multiplying the journey distance in column N on the record sheet by the fare in column L on the record sheet. Commercial travel%: This is the percentage of commercial trips associated with the particular vehicle. Simply add a new vehicle registration number and enter a description for the vehicle. system control panel. Distance variance: This is the variance between the standard customer distance in column C and the average distance in the previous column. If this cell is left blank, the date range will start on the first day of the years prior to the current year (thus, you can reasonably expect that all Logbook entries during the last 5 years will be included in the Vehicle Sheet cycles). This standard distances on the log sheet to ensure that accurate travel distances on the sheet can be used to calculate the commercial and private mileage of each vehicle based on any user-defined date range and customer selection. The template houses several vehicle: the customer's sheet cycles can be performed on the basis of a Vehicle or in all vehicles that have been added to the vehicle sheet. Therefore, it indicates a variance between the entry of the registration book and the distance standard to the Client location and can be used to identify errors in distance recording traveled for commercial purposes. Note: We strongly recommend the emission of these forms in a numbery sequence by changing the form number at the top of the sheet before printing the form. If you want the calculations to be based on a specific client code, simple select the appropriate client code in the list box in cell K4. Note: Template calculations only include the first 200 customer codes on the customers' sheet. If this default value is not sufficient, open the manager name function (tabs on the tape) and simply change the value of 200 that is specified for the clinters called Range to the required number of customer codes that must be included in the template CLASSES If you use this default private travel code for a business trip, this error will be displayed. If this default value is not sufficient, open the name manager function (tabs on the tape) and simply change the value of 200 that is specified for the Vrecords range called to the required amount of vehicle registration numbers that should be included in the template calements. Client: CLASSES In the vehicle sheet can be performed in a single client function or all customer codes that have been added to the client's sheet. Therefore, new customer codes should be created on the client sheet before being available for selection on this sheet. It is important to remember things like when you changed the oil the last time. Trip Type: Select "Business" or "Private" in the list box in this column. E2: This error code means that the client's code that has been selected in column H is válido. This information is very important for the companies of allitnalp allitnalp al ne riulcni nedeup es on sadartne sanugla ,oirartnoc ol ed ,ounitnoc adlec ed ognar nu ne esrasergni nebed solucÃhev ed ajoh al a nagerga es euq olucÃhev ed sorem^oÃn sol sodoT :atoN .solucÃhev ed Fare â Enter the mileage or kilometer rate to be charged to the customer. It includes important numbers such as fuel consumption and distance travelled. This way, you will know when to visit the workshop next. Client Name â enter the client name in this column. The template is suitable for people who need to produce a logbook for income tax purposes and for companies who need to manage a fleet of vehicles, calculate the amounts to be charged to customers, manage shared-use vehicles and analyse the commercial and private use of vehicles. Columns with light blue headers contain formulas that must be copied for all new client codes that are created. LOG BOOK PLANTS You can search for a vehicle registration template on the Internet. Note: The Filter feature can be used to display the detailed logbook records of any of the individual or combined totals in the Customers or Vehicles sheet, simply by applying the same filtering criteria that have been applied to the sheet corresponding to the columns of the log sheet. This client code has been created specifically for private trips and has been added to the client file. Daily use of a car can be recorded in this way. Note: An example of the entry required in each columns: Client code a unique client code must be created for each client account. Vehicle registration form The vehicle registration form on the form sheet can be printed and provided to drivers so they can register all business and private trips. Users can customize or use them without doing anything. roirepus etrap al ne sortlif ed senoicceles sal ne nasab es euq)oralc luza annuloc ed sotneimazebacne noc sanmuloc (sadaluclac sanmuloc setneiugis sal eneitnoc solucÃheV ed ajoh aL .oirausu led adartne ed sanmuloc sal ed areiuqlauc ne adartne al noc amelborp nu yah is rorre ed ogid³ÃC the the sheet: Total Mileage - this is the total mileage that has been recorded for the particular vehicle during the user defined period based on the logbook entries on the Logbook sheet. Charges are typically only applicable to business trips and a nil value is usually therefore specified for private trips. Note: A customer code of "XXX01" needs to be recorded on the Logbook sheet. Total Mileage by Month - these three columns display the total mileage per month which has been allocated to the client. Note: The vehicle registration number and client code selections are based on the contents of the Vehicles and Clients sheets. To enter the trip destination in this column. The monthly reporting periods are determined by the To Date which is specified in cell I4. Rate Charged - this is the average rate which has been charged for travelling to the client and is calculated by dividing the total charges by the total mileage. Filter Selection Options All the calculations in the light blue columns on the Clients sheet are based on the filter selections which have been specified at the top of the sheet. This is especially useful when you need to monitor sales representative uses a separate vehicle. These selections which have been specified at the top of the sheet are based on any user defined. date range and for any individual vehicle. Standard Distance - the standard trip distance is defined for each client on the Clients sheet. Number of Business trips per month which has been allocated to the vehicle. E4 - this error code indicates that an incorrect client code has been specified A business trip on the logbook sheet. Vehicle RUM number: Select the vehicle registration numbers must be created on the vehicle sheet before being available for selection. The sheet also contains a monthly analysis of total mileage, % business trips and the number of business travel for a period of three months. The distance must be based on the same measurement (miles or kilometers) that are the readings of the odometer on the registration sheet. Automobile workshops maintain such records for each of its customers. Having a copy of your vehicle registration with you will be useful. All error codes must be resolved to ensure that the staff's calculations remain accurate. The list box includes all the vehicles that have been added to the vehicles is, therefore, a formal worksheet of Excel, which serves many important purposes. These include mileage, the date for the last change of oil and other services. Print one and mantled it for your own use. The calculate the amounts that must be charged to customers in function of any date range defined by the user and vehicle selection. If you want the clamps to be based on a specific, simple vehicle, select the appropriate vehicle from the list box in cell K4. Shape: This sheet contains a form that can be printed and supplied to all controllers to record all private business and travel details. Note: Travel can be used to compile a complete vehicle logbook for multiple vehicles. Columns with light blue column headers contain formulas that are automatically copied for all new entries that are added to the table. In workshops, the cost for each. one. can also be registered in the System Control Panel. These selections allow users to compile a vehicle charge sheet based on any user-defined date range for which the calculations are performed on the sheet starts at the date defined by the user in cell G4. This calculation indicates the level of use of the vehicles in order to detect excessive private use of the vehicles. All private trips should be assigned to the default client code "XXX01" in column H of the log sheet. Simply create a new client code for all client accounts, enter a client name, and enter the applicable standard distance when travelling to the particular client. Total mileage per month that has been allocated to the vehicle. The calculations in these columns can be used to review the professional use of the vehicle for the corresponding quarter. Closing the odometer â enter the odometer reading at the end of the journey in this column. PREVIOUS AND DETAILS VEHICLE LOG BOOK TEMPLATE File size: 44 KB mobile [Android+iOS] & iPad Download Excel (.xls) 2007 & 2007 + File size: 22 KB Download OpenOffice Calc (.ods) Download your vehicle registration template from Synec That's right. The free templates can be printed from the Internet. If you want the calculations to be based on all customers, simply delete the contents of cell K4 to display a blank cell. All columns with light blue column headers contain chemulas that are automatically copied for all new rows that are added to this sheet. The log sheet contains the following user input columns (columns with yellow column headers): Total distance of the trip is calculated columns (columns with light blue column headers): Total distance of the trip is calculated by deducting the reading opening odometer reading of the closing odometer. Note: The total mileage and private mileage, as well as the appropriate percentages, are shown in column C and D at the top of the sheet. The calculations in these columns can be used to review the number of travel that have been assigned to the vehicle for the corresponding quarter. In this way, the particular record of each vehicle can be identified in a single glance. The cliente's sheet contains the following calculated columns with light blue columns wit the records that have been registered on the registration sheet. New customer codes should be created on the client sheet before being available for selection. No payments, without records, just a very useful template! This unique template allows users to compile a registration book For all business and private trips. In addition to the service records, a vehicle record can also be used to record the use of a particular automobile. The calculations in these columns can be used for for sol etnarud koobgoL ed sadartne sal sadot euq etnemelbanozar rarepse edeup es ,otnat ol rop(osruc ne o±Ãa led setna so±Ãa led aÃd remirp le ;Ãraznemoc sahcef ed ognar le ,ocnalb ne ajed es adlec atse iS .allitnalp al ed solucl; Ac sol rasiver ed setna navleuser es serorre sol sodot euq ovitarepmi se, otnat ol rop, y sotcaxeni allitnalp ed soluc. The calculations in these columns can be used to review the total mileage that have been assigned to each vehicle for the corresponding quarter. It has automobile ¢ÃÂÂs model number, license number, licens E1 - this error code means that the vehicle registration number that has been selected in column D is invalid. All the client codes that have been added to the Client sheet will be included in the list box. Driver - enter the name of the driver in this column. A vehicle maintenance log record several numbers for your automobile. This is especially useful when you need to monitor sales representatives with fixed routes. The columns with light blue column headings contain formulas which need to be copied for all new vehicles that are added to the sheet. All the vehicle registration numbers that have been added to the Vehicles sheet will be included in the list boxes in column D and the error can therefore be rectified by simply selecting a valid vehicle registration number from the list box. E3 - this error code indicates that an incorrect client code has been specified for a private trip on the Logbook sheet. If you want the calculations to be based on all vehicles, simply delete the contents of cell K4 in order to display a blank cell. Note: All the client codes that are created on the Clients sheet need to be entered in a continuous cell range otherwise some entries may not be necessary to add both trips to the logbook as it will only result in additional entries needing to be recorded on the Logbook sheet and will be displayed in the Error Code column. Average Distance - this is the average distance of the trips to the client as recorded on the Logbook sheet and is Dividing the total mileage by the number of travel. Total charges: This is the total number of charges that have been assigned to the customer's code and calculated by multiplying the travel distance in column N on the registration sheet by the L column N on the registration sheet by the L column L on the log sheet. The travel distance in column N on the registration sheet by the L column N on the registration sheet by the L column L on the log sheet. and closing odometer and compared to the standard distance for the selected client that is defined on the client's sheet. This helps make the final invoice. Note that the totals above the headers of the column will also be based only on the filtered records once a filter has been applied to the sheet. Travel Distance: Enter the standard distance that is applicable when you travel to the customer. The calculations in these columns can be used to review the number of travel that have been assigned to customers for the corresponding quarter. A separate record is maintained for each individual vehicle. The contents of these forms can be used to review the number of travel that have been assigned to customers for the corresponding quarter. the trip began. The details of the trip that are recorded in these forms can be entered into the registration sheet to compile a complete record book for each vehicle. All columns in the log sheet with yellow column headers require user input. Description of the vehicle: Enter a vehicle description in this column. Note: Apart from the traveling mileage, private trips generally do not need to be specified in detail for a trip. If the reading of the odometer is in kilometers, the travel distance will be in kilometers, the travel distance will be in kilometers. This is the number of travel that have been assigned to the customer. trip to private. East From the predetermined private shooting client, therefore, it must be kept in the list of client codes. Mileage of Business - This is the total business trip that has been registered for the concrete vehicle during the user-defined period based on the daily fishing notebook sheet. This will allow users to check the sequence of the forms to make sure that all seats in the Bitter notebook have been recorded. If round trips. Filter selection options All the calculations in the light blue columns of the vehicle sheet are based on the filter selections that have been specified at the top of the sheet. Opening of the odometer is on miles, the travel distance will be on miles. This calculation indicates whether the travel distance recorded on the daily fishing notebook sheet is consistent with the standard distance specified for the specific client. Rate charged: it is the average rate that has been charged to customers in the use of the vehicle for commercial mileage. If this cell is left blank, the interval of dates will end the last day of the current natural month (which is determined in the date of the current system). Travel time $\hat{a} \in$ "Enter the trip time in this column. Client's expenses that must be billed to each client in function of any dates interval defined by the user. Note: Template calculations only include the first 200 vehicle registration numbers in the vehicle card. Tickets can be added to the table simply by entering a travel date in the first empty cell in the column to â € "the table will be expanded solucl; Ac sol euq le arap sahcef ed olavretni le â etaD oT. acsep ed oiraid onredauc led ajoh al ne odangisnoc nah es soiralumrof sol sodot euq ed esrarugesa arap oiralumrof ed sorem^oAn sol ed aicneuces al esraborpmoc edeup, selaicneuces oiralumrof ed sorem^oAn noc nemirpmi es soiralumrof sol iS. adartne aveun al riulcni arap The sheet is performed ends on the date defined by the user in cell i4.
